Good step by step approach to help them achieve success.</li><li data-bbox="354 1220 1065 1262">● Ms. G puts in a lot of preparation before each lesson.</li><li data-bbox="354 1335 773 1377">● Very stimulating environment</li></ul>

## Observation Summary

*What's the hook? What is the essential question? What skills are being taught? Are students focused on the task? Do they know what they are expected to do? How are the students demonstrating learning or engagement? Is thinking visible and / or audible? Who is doing most of the talking? Is technology being used as a tool for engagement? Are students given time to think and share? Is student work posted or made visible? Is there evidence of time management?*

The core of Ms. G's excellence lies in the physical and emotional environment she creates. She has great understanding of self and is good at developing self-awareness in her students. The students have clear understanding of what is expected of them for any given project and are intimately familiar with the classroom. All this goes to creating an excellent learning environment no matter what they are working on.

## Learning Space and Culture Summary

*Is there evidence of students' thinking? Can you tell what they have been working on? Is the space appropriate for the # of students and the type of activity? Are there examples where the space is maximized for learning or not? Does the space facilitate collaboration? Does it feel like the learning space belongs to the students or the teacher? Does the class culture empower students to collaborate? Are students respectful and divergent? Do they feel confident about expressing their opinions or sharing their answers? Is student behavior managed appropriately? How were assessments used? Was there variation in activities? groupings?*

Ms. G's space is an excellent place for learning. As mentioned above, the students feel comfortable retrieving materials and know the boundaries. I found them very willing to share their ideas and express themselves. Ms. G manages the classroom giving everyone a voice.

## Overall Summary

*Was there evidence of organization? Was there evidence of 4D learning? Were thinking routines used? Did the teacher demonstrate sound pedagogical skills? Did the teacher demonstrate solid content mastery? Is a growth-mindset evident? Did the teacher demonstrate appropriate differentiation/tiering where necessary? Is the focus on the process, not the product?*

Unequivocally Ms. G's classroom is one in which the students see and participate in the creative process, both from a material standpoint and as a way to learn about themselves and their environment.
